# Foreword

The Planning and Statistics Authority (PSA) is pleased to present the most important indicators of main results of the General Census of Population, Housing and Establishments 2020 (Census 2020), along with a brief analysis of the most significant among them. This booklet includes a number of statistical tables and indicators for the main results that we came out with. However, the detailed results that include many tables covering all issues related to population, education, health, economic activity, and establishments will be published in detail and in various forms on the PSA website, and Qatar Statistics application on smart phones, as well as paper publications. Moreover, PSA will start working on the preparation of many statistical outputs in the form of technical reports about Qatar population, youth, women and children. PSA will also analyze the results of the Census and will issue analytical reports on various aspects of the population's life, work and so on.

It should be noted that the actual kick-off of Census 2020 began in December 2020, past its scheduled date in April 2020, due to the conditions imposed by the preventive and precautionary measures to limit the infection and spread of (Covid-19) pandemic. The State of Qatar leads the region in the complete implementation of Census 2020 under the circumstances of the pandemic. Although these conditions continued until the date of the census implementation, nevertheless, we were able to overcome the difficulties and obstacles imposed by the pandemic and implement the census in its scheduled year, using all means that contributed to carrying out the census safely for the community.

Census 2020 is the sixth in a series of population censuses in the State of Qatar, as previous censuses were conducted in 1986, 1997, 2004, and 2010, as well as the 2015 «simplified» Census). Stat-of-the-art technology was used in the implementation of this census in all its phases, which contributed to the effective, robust and quick extraction of the main results with a high degree of accuracy.

On this occasion, I would like to thank all households and establishments for their great and effective cooperation in providing us with the data that helped the success of this census. I also extend my thanks to all those who involved in the Census implementation; including PSA staff, ministries, agencies and various state institutions for their efforts to reach a «Successful Census for Sustainable Development».

**Dr. Saleh Mohamed Al Nabit**  
President of Planning & Statistics Authority

# Introduction

The General Census of Population, Housing and Establishments is the only statistical process that is conducted through an all-inclusive survey for all elements of society (residents, buildings and components thereof, residential and non-residential units, and establishments). The Census is launched to collect all characteristics that ultimately form comprehensive and accurate database to serve planners, researchers, and policymakers.

It should be noted that censuses are an integral part of the integrated statistical system in developed and developing countries alike, as they provide accurate data and important information on various aspects of the society and on the demographic, social and economic characteristics of the population of that society. Such characteristics are considered an indispensable input in the formulation of development programs.

For such reason, the Planning and Statistics Authority in Qatar has updated the techniques and methodologies used in the implementation of Census 2020; used cutting-edge statistical indices and classifications; developed staff training methods; established a call center and an operations room to successfully manage the census activities in an advanced manner; and accurately applied the census-related principles and recommendations issued by the United Nations Organization.

From a scientific and technical perspective, the General Census of Population, Housing and Establishments has an essential role in all elements of the national statistical system, including population, social, economic and urban statistics. Census data is used as a benchmark or a base year for statistical compilation or as a sampling frame for sample surveys, as well as a basis point in research, analysis and future population projections.

## 1. Total Population:

In Census 2020, the population rose by about (1,147) thousand people compared to Census 2010, bringing the population in Census 2020 to almost (2,846) thousand people, which represents an increase of (67.5%) compared to Census 2010. The annual growth rate between Census 2010 and Census 2020 amounted to (5.3%), with a decrease in the annual growth rate compared to that between 2004 and 2010 censuses, when it was (14.8%). The increase in male population represented the largest percentage of population increase, as the male contribution to that increase was (65.4%), while the female population accounted for (34.6%) of the total increase.

As for the total number of the population by gender, the male population increased by (58.4%) to reach (2,035) thousand people, which represents (71.5%) of the total population in Census 2020. This percentage declined from Census 2010 as males were (75.6%) of the total population. On the other hand, the number of females almost doubled by (95.7%) to reach (812) thousand people, which represents (28.5%) of the total population in Census 2020, an increase from the percentage of females in Census 2010, which amounted to (24.4%).

• Source: Table No. (1)

Figure 3: Total Population Distribution by Age Groups (2010, 2020)

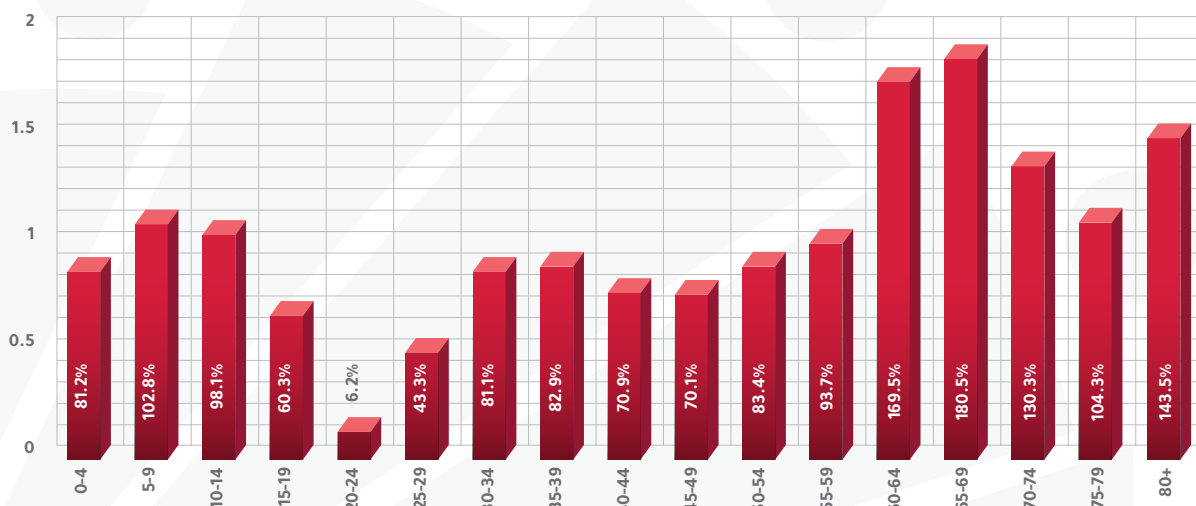

## 2. Total population by age and gender:

In general, the population increased in all age groups in Census 2020 compared to Census 2010. Age group (30 - 34) topped the list of the highest increase in numbers, with an increase of approximately (219) thousand people.

As for the increase rate in each age group, the highest increase rate occurred in the (60+) age groups, as the numbers of elderly in each of these groups doubled at least once, and the age group (65 - 69) topped the list of the highest increase in the same category, with an increase of (180.5 %).

Figure 4: Increase rate in each age group for the total population in Census 2020

The sex ratio in Qatar in Census 2020 reached (251) males per (100) females compared to (310) males per (100) females in Census 2010.

• Source: Table No. (2)

Figure 5: Population Pyramid 2020

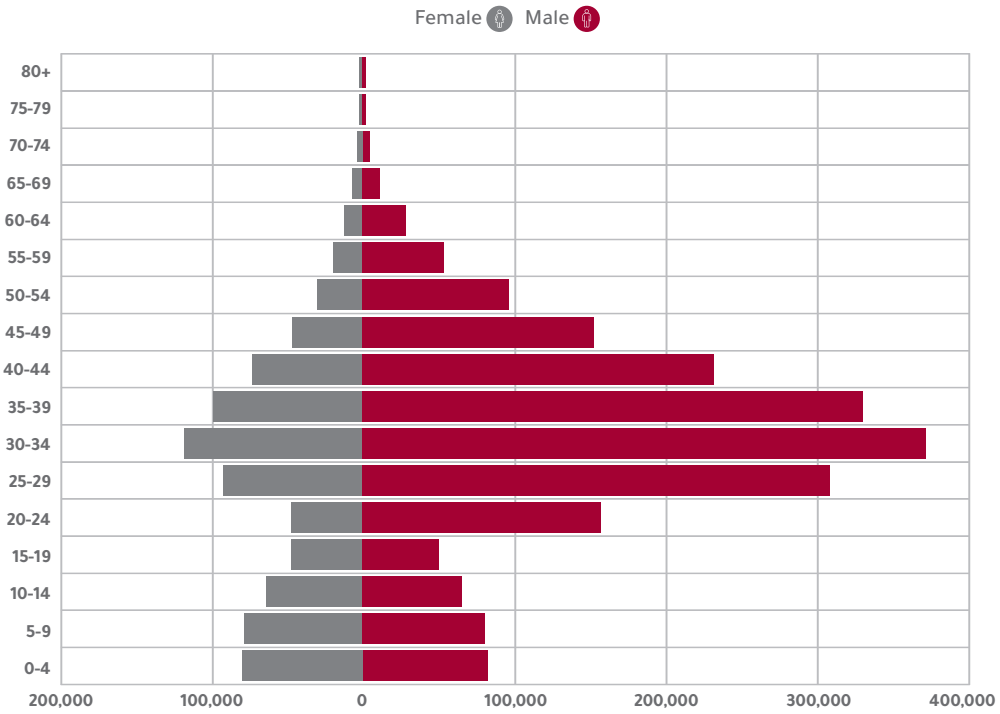

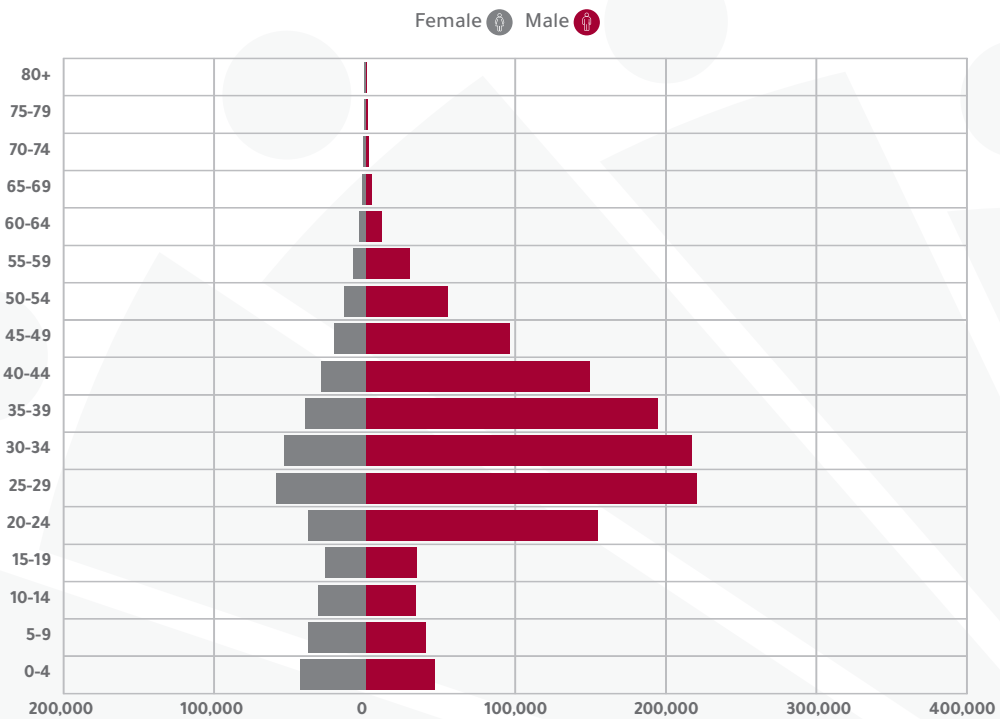

Figure 6: Population Pyramid 2010

• Source: Table No. (2)

### 3. Population density by municipality:

Population density increased in Census 2020 by (67.5%) compared to Census 2010, amounting to about (244.6) people per square kilometer, compared to (146,0) people per square kilometer in Census 2010.

As usual, Doha Municipality topped the highest population density, reaching (5,344.1) people per square kilometer of the area of Doha Municipality, after it had recorded only (3,590.9) people in Census 2010. Despite this, its percentage of the total population decreased from (46.9%) in 2010 to (41.7%) in 2020. Umm Salal Municipality maintained the second place in terms of population density, which reached (471.0) people, while Al-Rayyan Municipality occupied the third place, with a population density of (337.5) people.

It should be noted that (41.7%) of the total population resides in Doha Municipality, while (29.0%) of the total population resides in Al Rayyan Municipality, which is the second highest percentage of the population in municipalities.

Figure 7: Total Population by Municipality in 2010 and 2020 Censuses

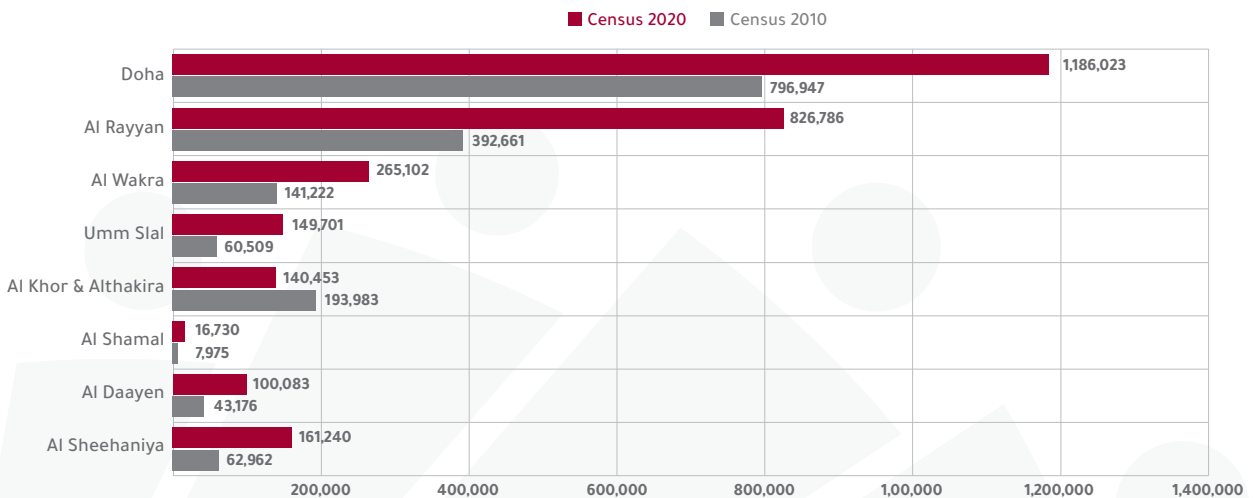

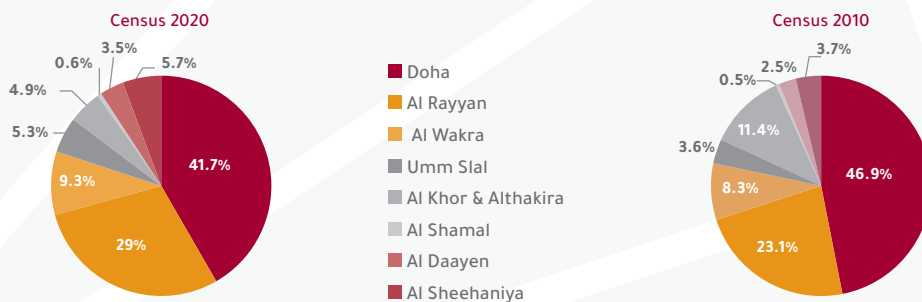

Figure 8: Percentage of population distribution in municipalities in 2010 and 2020 censuses

• Source: Table No. (4)

• Some municipalities were affected by the change occurred to their administrative boundaries between the two censuses.

\* The difference in the density ratio from the population is a result of rounding of decimal fractions.

#### 4. Education Attainment of Population (10 years and above)

The percentage of Qataris who obtained a high school certificate or higher increased at the expense of the less educated groups, as the percentage of Qataris with a secondary certificate reached (29.2%) of the total Qataris (10 years and above) compared with (27.9%) in Census 2010. The percentage of Qataris who obtained a University degree or higher amounted to (33.9%), compared to (20.3%) in Census 2010. This trend was also noticeable among the non-Qatari population as well.

Figure 9: Percentage of Qataris (10 years and above) by educational attainment in 2010 and 2020 Censuses

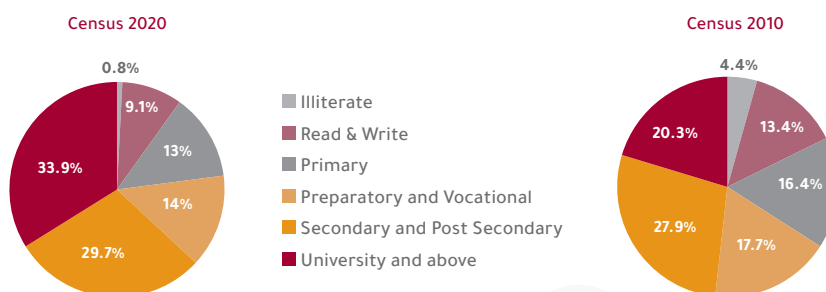

Figure 10: Percentage of non-Qatari population (10 years and above) by educational attainment in 2010 and 2020 Censuses

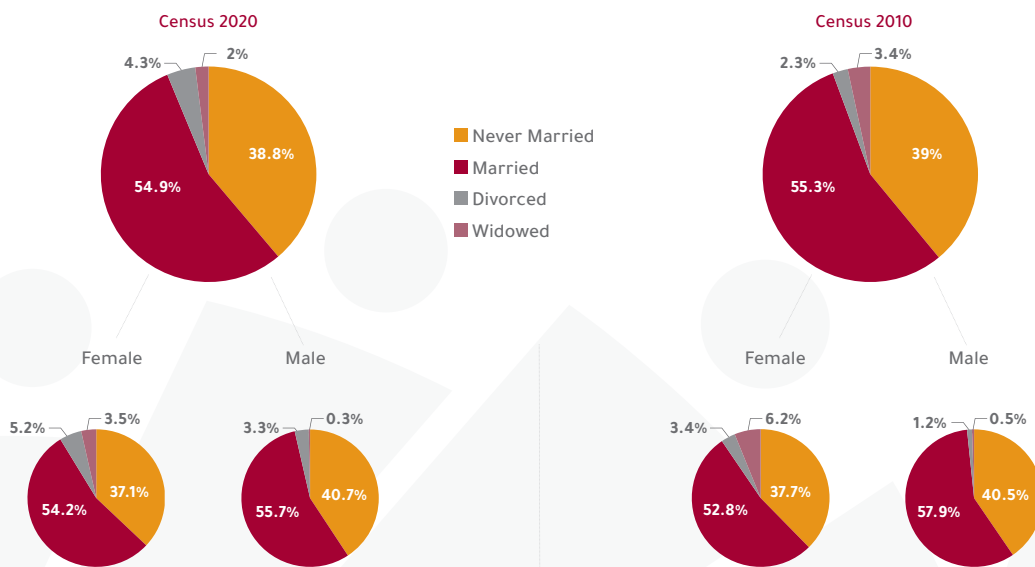

• Source: Table No. (5)

## 5. Marital Status of Qataris (15 years and above):

The results of Census 2020 showed that 54.9% of Qataris (15 years and above) are married, and that 38.8% have never been married, which is very close to their percentages in 2010 Census. However, despite such close ratios, their numbers have increased in Census 2020 compared to Census 2010.

As for the divorced, their percentage increased to reach (4.3%) in Census 2020, compared to (2.3%) in Census 2010 for total Qataris (15 years and above), while the percentage of widows decreased, reaching (2.0%) compared to (3.4%) in Census 2010.

Figure 11: Percentage distribution (%) of Qataris (15 years and above) by marital status and gender in 2010 and 2020 Censuses

In terms of distribution by gender, the results showed that (55.7%) of Qatari males and (54.2%) of females are married, while the percentage of males and females who have never been married reached (40.7%) and (37.1%), respectively.

As for the remaining percentage, it was distributed between divorced and widowed, reaching (3.3%) for divorced males and (5.2%) for divorced females, and the percentage of widowed males and females was (0.3%) and (3.5%), respectively, of the total Qataris (15 years and above) in Census 2020.

• Source: Table No. (7)

## 6. Economically active population (15 years and above) by working status:

The percentage of economically active Qataris (15 years and above) who are paid employees increased slightly by (0.6) percentage point at the expense of those with other working status between 2010 and 2020 censuses, reaching (97.7%) in Census 2020, compared to (97.1%) in Census 2010. The percentage of increase between the two censuses was (60.1%). The percentage of increase for employers between the two censuses was (37.0%).

As for economically active non-Qataris (15 years and above), the percentage of paid employees declined slightly to (99.6%) from (99.8%) in Census 2010, while the percentage of non-Qatari employers increased to (0.3%) compared to (0.1%) in Census 2010.

Figure 12: Percentage distribution of economically active Qataris (15 years and above) by working status in 2010 and 2020 Censuses

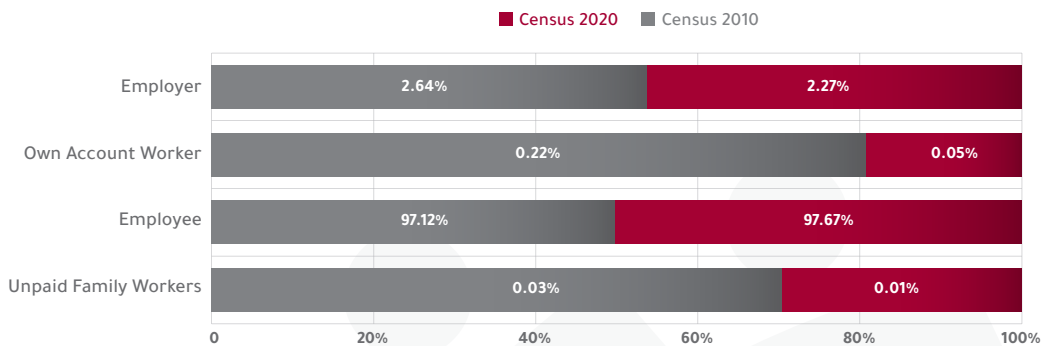

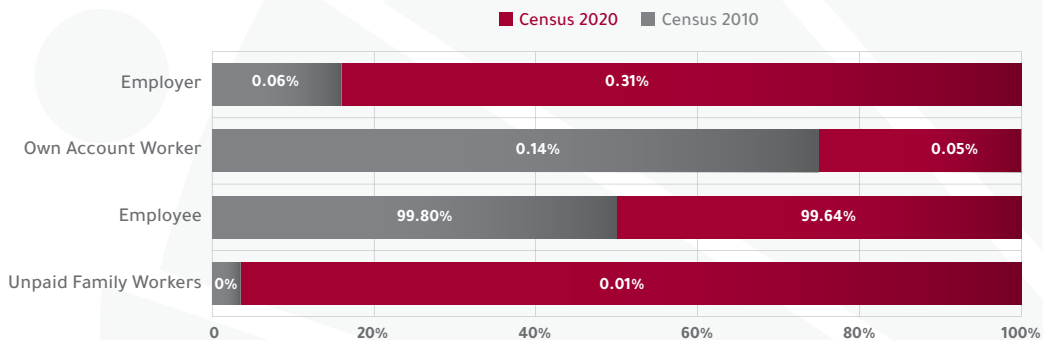

Figure 13: Percentage distribution of economically active non-Qataris (15 years and above) by working status in 2010 and 2020 Censuses

• Source: Tables No. (8), (9), (10)

## 7. Economically active population (15 years and above) by occupation:

The percentage of the economically active population (15 years and above) has increased for those working in the professions of Managers, Professionals and Technicians, at the expense of other occupations (such as Craft Workers, Plant and Machine Operators, and Elementary Occupations). This percentage shrinks as we turn to the professional occupations to record a decrease in workers in crafts and elementary occupations for both Qataris and non-Qataris. Moreover, there has been a decline in the number of Qataris working in service and sales jobs.

Generally speaking, the economically active Qataris (15 years and above) work mainly as managers and professionals, as well as technicians, associates and clerks. On the other hand, the largest number of economically active non-Qataris (15 years and above) is concentrated mainly in craft and related trades as well as in elementary occupations.

Figure 14: Percentage distribution of economically active Qataris (15 years and above) by occupation in 2010 and 2020 Censuses

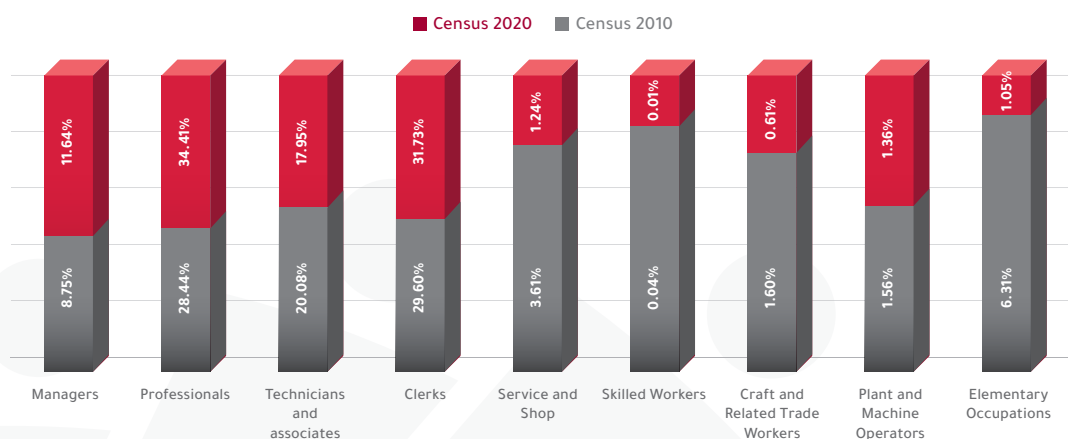

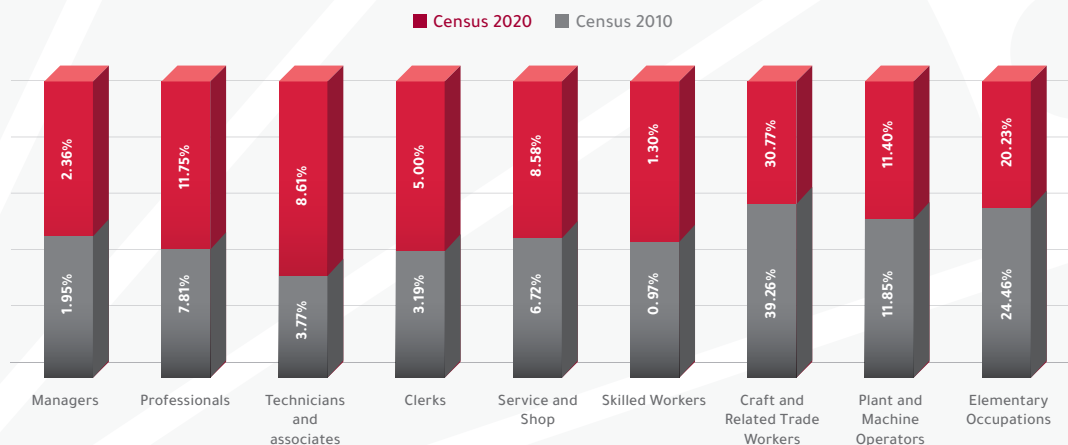

Figure 15: Percentage distribution of economically active non-Qataris (15 years and above) by occupation in 2010 and 2020 Censuses

• Source: Tables No. (11), (12), (13)

## 8. Economically active population (15 years and above) by main economic activity:

Economically active Qataris are concentrated in Public Administration and Defense activities at (53.5%), followed by Education at (12.3%), then Health and Social Work activities at (6.2%).

As for non-Qataris, they concentrate in the Construction activity at (34.1%), followed by the activity of Wholesale and Retail Trade; Repair of Vehicles at (12.5%), and then the activity of Administrative and Support Service Activities at (9.6%).

Figure 16: Percentage distribution of economically active Qataris (15 years and above) by economic activity in 2010 and 2020 Censuses

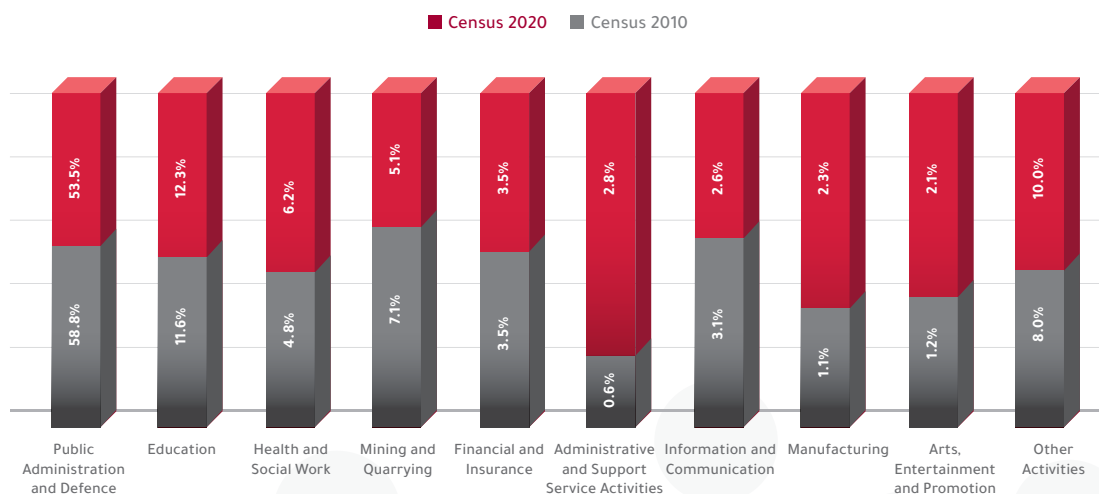

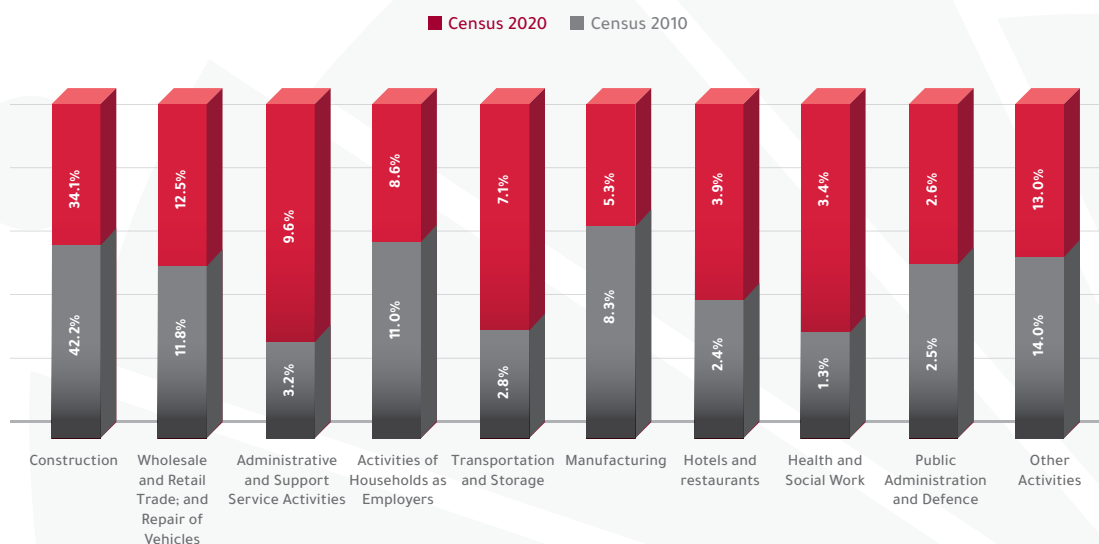

Figure 17: Percentage distribution of economically active non-Qataris (15 years and above) by economic activity in 2010 and 2020 Censuses

Source: Tables No. (14), (15), (16)

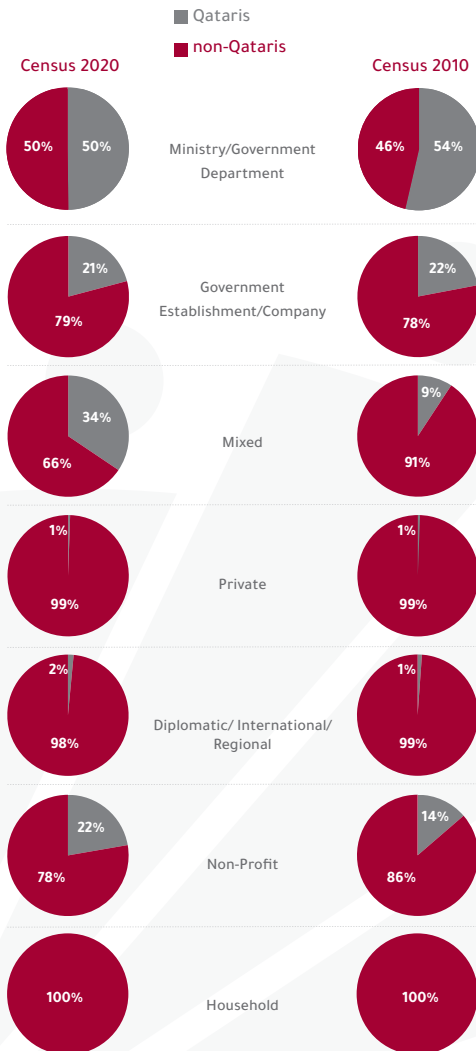

## 9. Economically active population (15 years and above) by sector:

The results showed an increase in the percentage of Qataris working in the Mixed Sector between 2010 and 2020 censuses, as their percentage reached (34%) in Census 2020 compared to (9%) in Census 2010 of the total workers in the Mixed Sector, while non-Qataris accounted for more than (98%) of workers in the Private, Household, Diplomatic / International / Regional Sectors.

Further, Census 2020 results showed that (78.9%) of the total jobs are in the private sector, followed by the household sector at (8.2%), then the government sector at (8.1%).

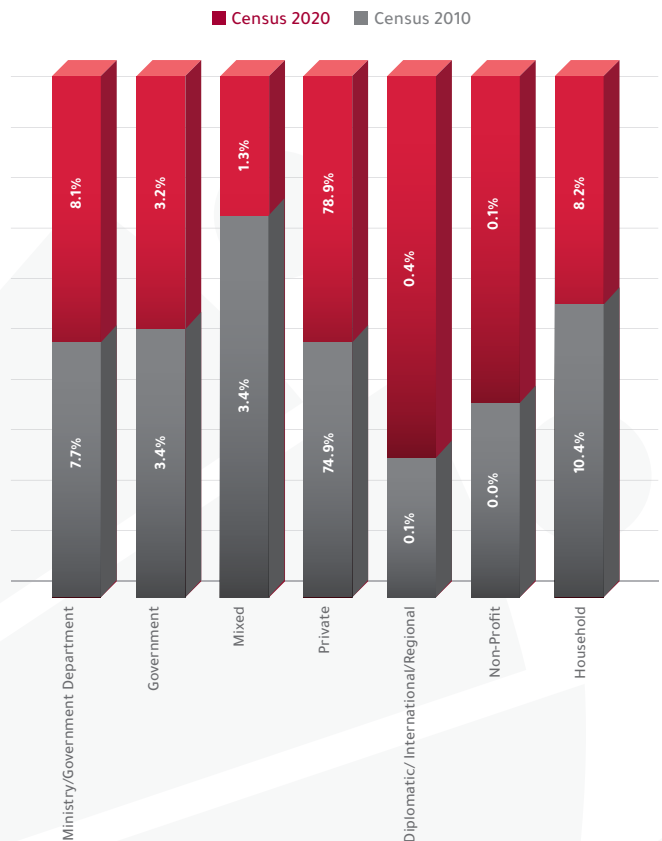

The results show a rise in the percentage of private sector jobs by (4.0) percentage point, while the percentage of jobs in the government sector rose by (0.4) percentage point.

Figure 18: Percentage distribution of the total economically active population (15 years and above) by nationality and sector in 2010 and 2020 Censuses

• Source: Tables No. (17), (18), (19)

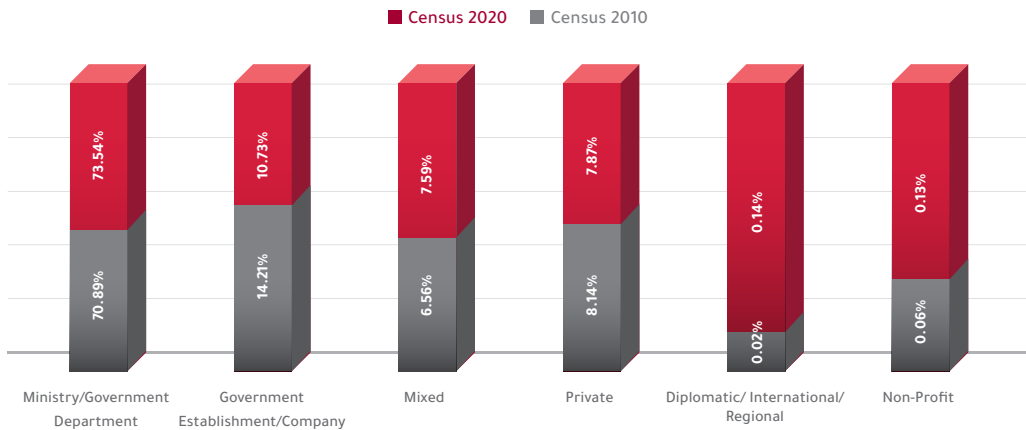

Figure 19: Percentage distribution of the total economically active population (15 years and above) by sector in 2010 and 2020 Censuses

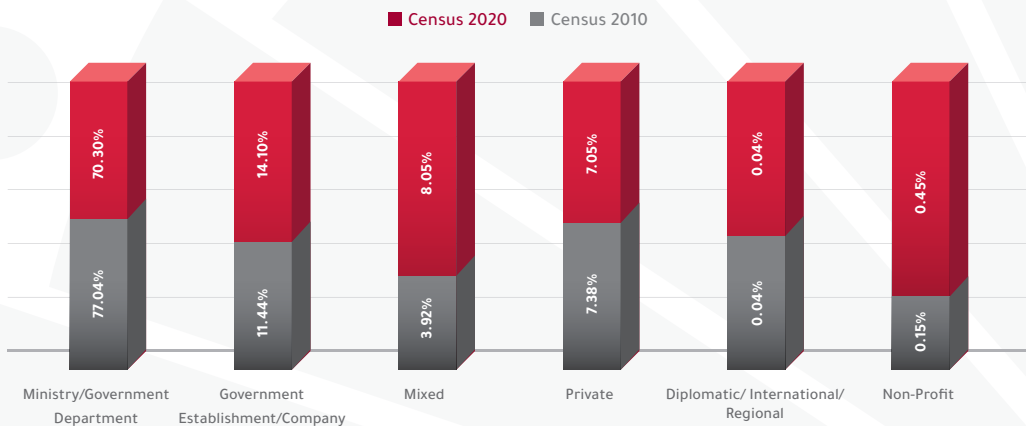

The percentage of Qatari males working in the government sector in Census 2020 increased by (2.7) percentage points. This is the largest sector in which Qatari males work, as their percentage in Census 2020 reached (73.5%) of the total number of economically active Qatari males (15 years and above), followed by the government establishments sector, which comes in second place as the largest sector in which Qatari males work, although their percentage declined in this sector between the 2010 and 2020 Censuses.

Figure 20: Percentage distribution of economically active Qatari males (15 years and above) by sector in 2010 and 2020 Censuses

As for employed Qatari females, the percentage of the highest increase in Census 2020 was in the mixed and governmental institutions sectors with (4.2) and (2.7) percentage points, respectively, compared to (6.7) percentage points in Census (2010).

Figure 21: Percentage distribution of economically active Qatari females (15 years and above) by sector in 2010 and 2020 Censuses

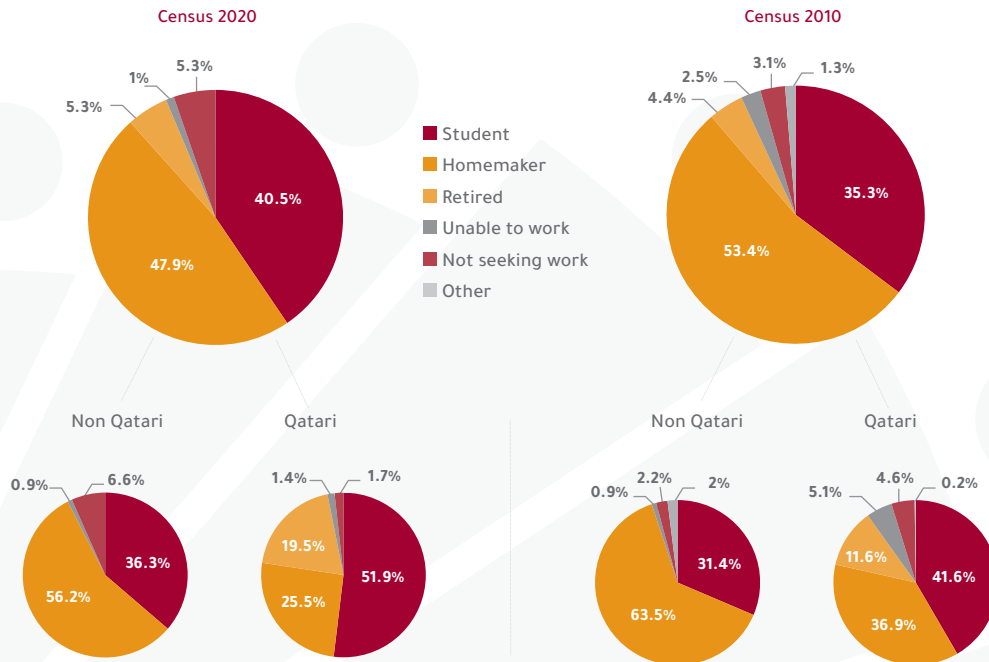

• Source: Tables No. (18)

## 10. Economically inactive population (15 years and above) by relation to workforce

The percentage of students in the economically inactive population (15 years and above) increased by (5.2) percentage points compared to the percentage of homemakers, which decreased by (5.5) between the 2010 and 2020 Censuses. The percentage of Qatari and non-Qatari students increased by (10.3) and (4.9) percentage points, respectively, while the percentage of Qatari homemakers decreased by (11.4) percentage points and non-Qatari women by (7.3) percentage points between the 2010 and 2020 Censuses.

As for Qatari retirees, their percentage went up by (7.9) percentage points to reach (19.5%) in Census 2020, compared to (11.6%) in Census 2010. The percentage of those unable to work declined to reach (1.4%) in Census 2020, compared to (5.1%) of the total economically inactive Qatari population (15 years and above) in Census 2010.

Figure 22: Percentage distribution of economically inactive population (5 years and above) by nationality and working status in 2010 and 2020 Censuses

Source: Tables No. (20), (21), (22)

## 11. Population with Difficulties (5 years and above) by type and degree of difficulty:

The number of difficulties among population (5 years and above) is about (33.7) thousand, and Census 2020 results showed that Movement and Mobility difficulty is the most common (19.5%), followed by difficulty in remembering and concentrating (16.7%) of total difficulties.

The results also showed that difficulties with a simple degree “some difficulty” constitute (49%) of total difficulties of all types, while “lot of difficulty” accounts for (32%) of difficulties and “can’t do at all” (full disability) accounts for (19%) of health difficulties.

Figure 23: Percentage distribution of number of difficulties in population (5 years and above) in 2010 and 2020 Censuses (one person can suffer from more than one difficulty)

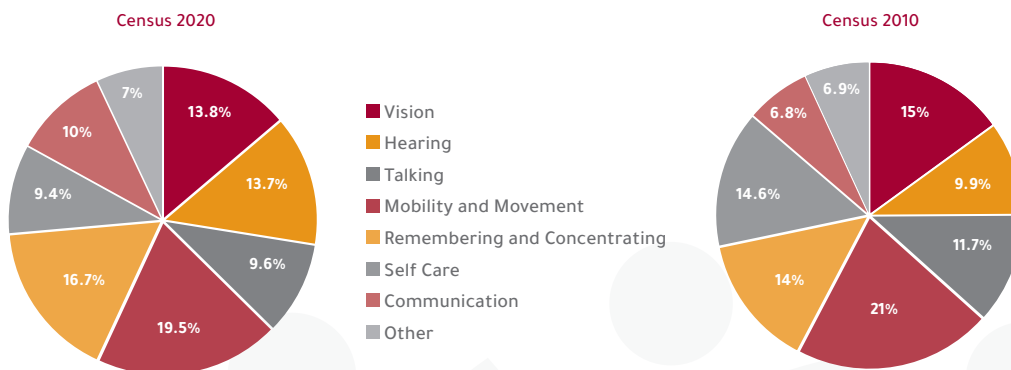

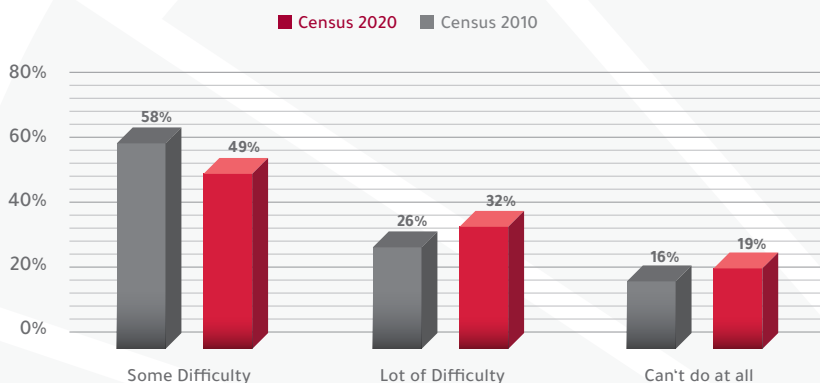

Figure 24: Percentage distribution of degree of difficulties in population (5 years and above) in 2010 and 2020 Censuses

Source: Tables No. (23)

## 12. Qataris in Households (4 years and above) by age groups, computer and Internet use:

The percentage of Qataris (4 years and above) who use the computer increased by (20.4) percentage points between 2010 and 2020 Censuses. Their percentage reached (95.9%) of the total Qatari population (4 years and above) compared to (75.5%) in Census 2010. The percentage of internet users also increased to reach (96.7%) in Census 2020, compared to (72.6%) in Census 2010.

Results also showed that most of these uses are inside houses for all Qataris in all age groups, while their use outside the home decreases, especially the use of computers. Age group (15 - 64) recorded the highest use of the Internet outside the home.

Figure 25: Percentage of Qataris (4 years and above) by the use of computers and the Internet in 2010 and 2020 Censuses

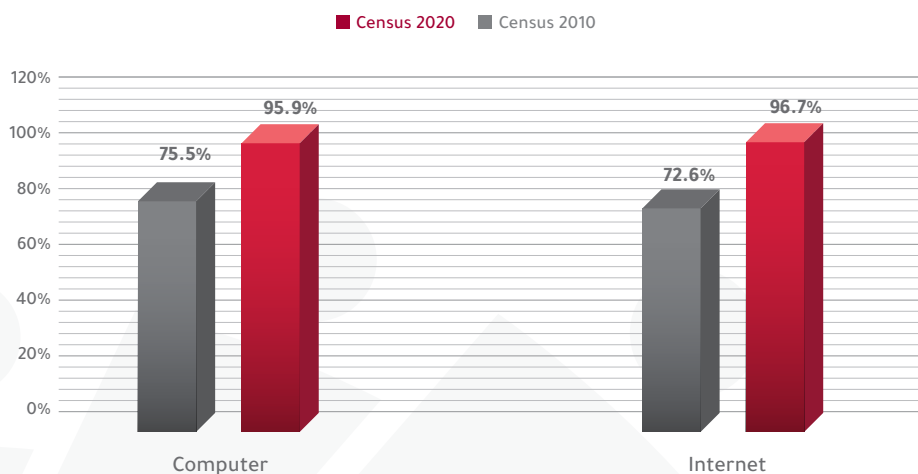

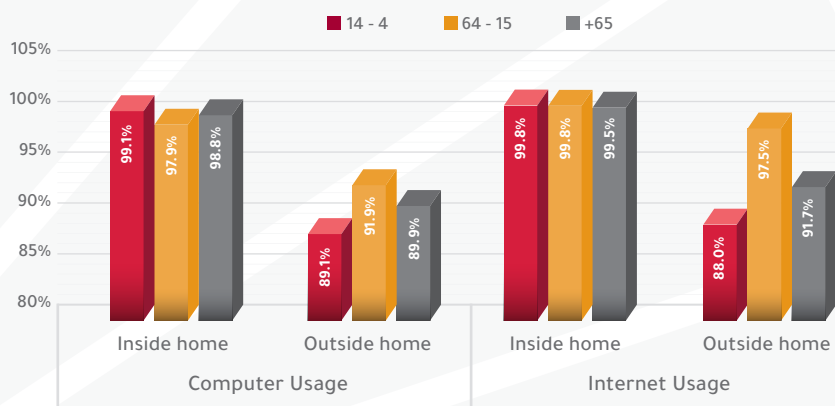

Figure 26: Percentage of Qataris (4 years and above) using computers and the Internet, by age groups and place of usage in Census 2020

• Source: Tables No. (24) and (25)

### 13. Buildings by Building Status and municipality:

The number of buildings increased by (49.7%) between 2010 and 2020 censuses, to almost (222.7) thousand buildings in Census 2020.

The percentage of completed buildings in Al Rayyan Municipality slightly rose than those in Doha Municipality. The percentage of buildings located in Doha and Al Rayyan in Census 2020 constitute (61.9%) of the total buildings in Qatar, compared to (73.4%) in Census 2010. This decline is attributed to the rise in the annual increase in the remaining municipalities compared to Doha and Al-Rayyan between 2010 and 2020 Censuses.

Generally, the percentage of the increase in buildings in all municipalities went up between 2010 and 2020 censuses, compared to 2004 and 2010 censuses. As for the highest rate of increase in buildings, which occurred between the 2010 and 2020 censuses, it was reported in Al Daayen Municipality at (300%).

Figure 27: Number of Buildings by Municipality in 2010 and 2020 Censuses

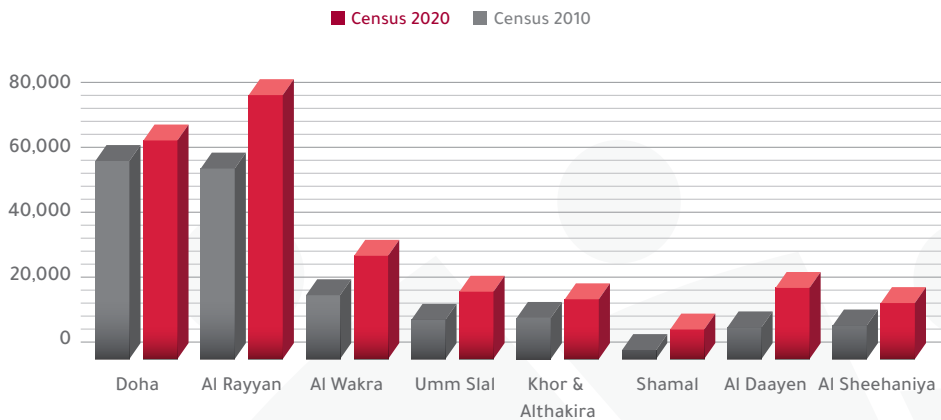

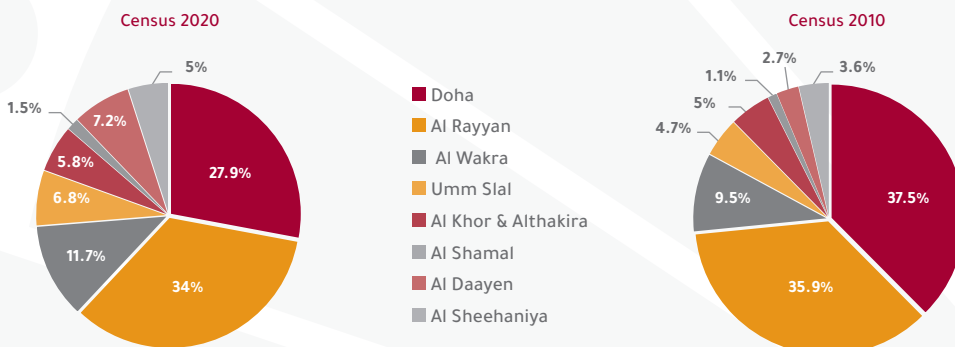

Figure 28: Percentage distribution of buildings by municipality in 2010 and 2020 censuses

• Source: Tables No. (26)

• Some municipalities were affected by the change in their administrative boundaries between the two censuses.

## 14. Housing Units by Type and Municipality:

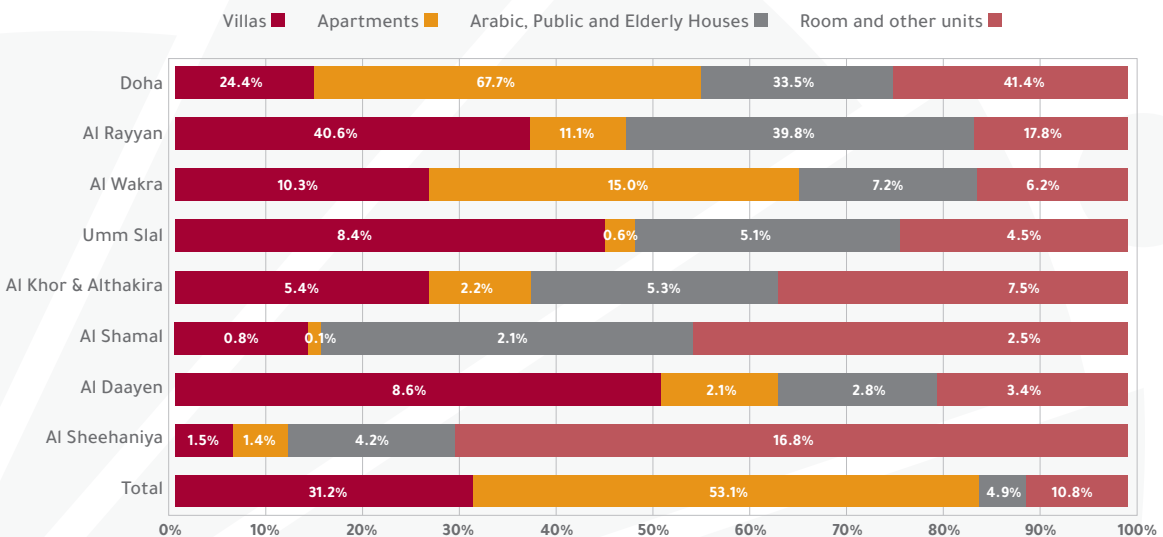

The number of housing units increased by (55.8%) between the 2010 and 2020 censuses to reach approximately (403.8) thousand units in Census 2020. The apartments constituted (53.1%) of the total housing units in Qatar, where Doha Municipality share of those apartments reached (67.7%).

As for villas, they accounted for (31.2%) of the total housing units in Qatar, where Al-Rayyan municipality share was (40.6%) of those villas, while Doha municipality accounted for (24.4%) of the total villas in Qatar.

Figure 29: Percentage distribution of housing units by municipality (2010 and 2020)

## 15. Business Establishments and Persons Engaged

The number of business establishments increased by (130.6%) between the 2010 and 2020 censuses, reaching almost (71,2) thousand in 2020 Census. This increase was distributed in all economic activities at varying rates, the highest was in the transport and storage activity, with an increase of (431.2%).

As for those employed in business establishments, their number increased by (59.7%). The highest increase occurred in the activities of administrative and support services, with an increase of (423.5%), while the number of those employed in business establishments operating in mining and quarrying activity decreased by (61.9%).
